## **Instructions for completing CANENA Project Request Form**

Since CANENA is not itself, a Standards Development Organization (SDO), part of the approval process for a CANENA project is endorsement and commitment of participation by the relevant SDO in each “participating country.” The CANENA Secretary will forward copies of the Project Request to the SDOs. Unless otherwise notified with the project request, the relevant SDOs in Mexico, Canada and the USA are: ANCE, CSA, and UL, respectively. These three SDOs will typically look for in country industry commitment to the project. According to their published harmonization procedures, the preferred source for evidence of industry commitment is the predominant industry trade associations. An official letter of commitment from the relevant industry in each “participating country” shall accompany the project request.

*The purpose of this form to assist interested parties in the process of initiating a standards harmonization project to be conducted under the auspices of CANENA. The use of this form, as a guide, ensures compliance with published CANENA Standardization Procedures and the Procedures for Harmonizing ANCE/CSA/UL Standards. The full text of these procedures can be found at [www.canena.org](http://www.canena.org).*

### **Fields to be completed by project initiator**

**Project Title and Description:** A brief title for the project helps to distinguish one project from another. The description should be brief and not restate the scope. A statement of objective is appropriate (*Example: To develop a trinational, identical standard for molded case circuit breakers that is harmonized, to the extent possible, with the relevant IEC standard*).

### **SECTION 1:**

**Submitter and Contact Information:** It is important that the submitter provide contact information so that any questions can be quickly addressed.

**Scope:** If a completely new standard, state that no known standards exist for the product, then refer to the project description. For a project to harmonize existing standards, list all existing standards to be considered and their current edition and publication dates. It is important to note that according to the published procedures, when an IEC standard exists for the product(s) under consideration, technical rationale must be provided when that IEC standard is not considered in the scope of the project.

**Rational:** The rationale for initiating a regional harmonization effort is required at project initiation and likely will be stated in the preface to the final standard.

**Trade Association Support:** Support from the industry sector having a material interest in the standard in question is crucial for achieving consensus to initiate the regional harmonization effort.

**Other Supporting Associations:** When the regional harmonization involves a standard which is used by other industry sectors, outreach to those sectors is needed for achieving consensus on project initiation.

Once completed, email this form to [joel\\_solis@nema.org](mailto:joel_solis@nema.org). Shortly, an acknowledgment of receipt will be provided. Acknowledgment is intended to provide assurance that the request will be acted on.
